

# The ABC of Computational Text Analysis

## *SUPPLEMENTS*

Alex Flückiger

Faculty of Humanities and Social Sciences  
University of Lucerne

14 April 2024

# Purpose

Here I present some stuff that we did not cover in class.

# Tasks

- find various ngrams with wildcards
- check gender specific language  
what follows *she/he* or *her/his*

# Topics

## Techniques

- text processing
- extracting and aggregating information
- creating simple visualizations
- optical character recognition (OCR)
- scraping files

## Data

- using existing datasets
- creating new datasets

*inputs are more than welcome!*

# Data vs. Cap ta

« Differences in the etymological roots of the terms data and capta make the distinction between constructivist and realist approaches clear. *Capta* is “**taken**” actively while *data* is assumed to be a “**given**” able to be recorded and observed. »

« Humanistic inquiry acknowledges the situated, partial, and constitutive character of knowledge production, the recognition that knowledge is constructed, *taken*, **not simply given as a natural representation** of pre-existing fact. »

# Forms of Data

- **content data**  
clean, plain text data  
preferable as **.txt**
- **metadata ~ information about the actual data**  
publishing date, authors, source, version  
preferable as **.csv**

show with default application (GUI)

```
open text.txt          # macOS  
wslview text.txt       # WSL Ubuntu (Windows)
```

# Key Word in Context (KWIC)

```
ptx -f -w 50 */*.txt > ptx.txt  
egrep -i "[a-z] word" ptx.txt
```

# Select Column in Dataset

```
cut -d\t -f1 # extract the 2nd column from a tab-separated file
```

# Extract texts from tsv:

- <http://www.theunixschool.com/2012/05/shell-read-text-or-csv-file-and-extract.html>

# Variables

```
echo "Starting program at $(date)"
```

# Better Tokenization

- tokenization ~ splitting into words

```
# new, improved approach
cat text.txt | tr -sc "[a-zäöüA-ZÄÖÜ0-9-]" "\n"

# old approach
cat text.txt | tr ' ' '\n'
```

# Batch Processing

```
for file in *.txt; do          # loop over all text files
  cat "$file" | pipe commands > "proc_$file"
done
```

# Batch Renaming

```
rename " " "_" *.txt # replace spaces with underscores
# since there are different versions, if this doesn't work try:
# rename 's/ /_/ ' *.txt
```

```
i=1
for file in *.txt; do # loop over all text files
    mv -- "$file" "text_$i.txt" # rename each file with a sequential number
    i=$((i+1))
done
```

# Outlook: NLP is on Fire 🔥

- supervised machine learning
- you can do basically anything with modern NLP
  - train on human-annotated data
- effort, insights and quality may differ
  - for better or worse

# Mind your Data

- Who has a voice in your data?  
social context
- **bigger is not necessarily better**  
more vs. more diverse data
- **clean your data thoroughly**  
noisy vs. clean data

**Anatomy of AI** (Crawford and

Joler 2018)

**illustrated by the  
Amazon Echo**

# Nothing to hide?

- Data for targeting ads to chase climate activists
- TODO

Crawford, Kate, and Vladan Joler. 2018. "Anatomy of an AI System." Anatomy of an AI System. 2018.
